Seventh-grader Luna from Stillwater Public Schools in US, did something good for her community. She held a blanket drive (毛毯捐赠活动) in November, picking up blankets from different places and giving them to homeless organizations (组织) such as Pioneer Pantry.

“Since she is a Payne County team leader who likes doing community projects, and she tries to come up with one or two a year to do, this is the one that she decided she wanted to do this year,” Luna’s mother told *Stillwater News*.

To donate (捐赠) to Luna’s community project, people could send blankets to a local county office or call her to come and pick the blankets up. There were 125 blankets donated to the Pioneer Pantry.

Luna chose to do a blanket drive because schools usually do coat drives while other organizations do mitten (手套) drives. A blanket is nice because it can help people stay warm at night, and it isn’t as heavy as a coat, she told *Stillwater News*.

It is very important to Luna that she works for those in the Stillwater community who are around her age—because she sees their struggles (挣扎) firsthand. “At first, I couldn’t think of a community project, then somebody said at school that they didn’t have a blanket and they were not sure what to do, so I decided to do a blanket drive,” Luna said.

She hopes that she can help keep the community warm this winter, as well as call on others to help people in need.

33. What do we know about the blanket drive?

A. Because a blanket is large and heavy.

D. Because a blanket can give more warmth in daily life.

A. A Lovely Community

B. Plans for the Homeless

C. Handing out Warmth

①Scientists have found that plants can make sounds.

②A scientist Lily Hadany and her team recorded (录制) tomato plants at different times. It showed that the plants made ultrasonic (超声波) sounds. People could only hear them with the help of a computer. They were noises like clicking sounds.

③As the scientists studied the sounds, they began to find some interesting facts. Plants made different sounds at different times. They seldom clicked (发出咔嚓声) when they had enough water, but when they needed water, they clicked more and more. Scientists also found that plants made sounds when they got hurt. When scientists cut off a leaf from the plants, the plants also clicked more. But the clicking wasn't the same as when the plants needed water.

④Some scientists designed a computer AI system to tell the different kinds of clicking sounds. It was able to find the difference between plants that needed water and plants with cuts. It means that one day we may be able to use these sounds to find out when it is in difficult time, and what problem it is having. That could be very helpful to farmers.

⑤The team's finding changes our ideas about plants. As Dr. Hadany says, "Even in a quiet field, there are sounds made by plants, and those sounds carry information and may help us a lot."

37. Which of the following may you need if you want to hear the sounds of plants?

- B. Ask teachers for help.
- C. It is not a good idea to do things like that.
- D. but there is some advice that may help you.
- E. Just be yourself, be cheerful and be friendly.
- F. If new friends invite you to a party, join them happily.
