# 1 Introduction

Quectel provides DFOTA (Delta Firmware Upgrade Over The Air) function, which allows you to upgrade the firmware of the module over the air. It can upgrade the firmware to a new version, and upgrade back to the old version as well.

By using DFOTA, you only need to download the delta package into the module, which contains only the differences between the old and new firmware versions, thus reducing the amount of data transmitted and accelerating the speed of firmware upgrade.

This document is applicable to Quectel UGxx modules.
