Definition of organic compounds

Summary

Organic compounds refer to compounds containing carbon elements, except for carbon oxides, carbonates, bicarbonate, etc.

Detailed description

Organic compounds are mainly composed of elements such as carbon, hydrogen, oxygen, nitrogen, etc. The carbon atoms are connected by covalent bonds to form long chains or cyclic structures. Organic compounds are widely present in nature and closely related to human life.

Classification of organic compounds

Naming rules for organic compounds

Hydrocarbon compounds

Alcoholic compounds

Acid compounds
