新冠肺炎疫情下实习护生职业认同感的质性研究

摘要 **目的** 通过质性研究的方法探讨新冠肺炎疫情下实习护生心理反应及职业认同感。**方法** 采用质性研究的方法，以个人半结构式访谈法收集资料。运用 Colaizzi 七步分析法对资料进行整理与分析，并提炼主题。**结果** 根据访谈结果，提炼出 4 个主题，分别是对新冠肺炎的认识、疫情下复杂的心理反应、疫情对实习护生职业认同的影响、疫情后是否愿意从事护理工作。**结论** 护生对新冠肺炎的认识并不全面，疫情下实习护生心理反应复杂，并且此次疫情成为实习护生职业认同的重要影响因素，尽管如此，疫情后实习护生仍表示愿意从事护理工作。

(1. Qualitative study on occupational identity of nursing students under COVID-19

Abstract **Objective** To explore the psychological response and professional identity of nursing students under COVID-19 epidemic situation through qualitative research. **Methods** Qualitative research was used to collect data by personal semi-structured interview. Colaizzi seven-step analysis method was used to sort and analyze the data and extract the themes. **Results** According to the interview results, four themes were extracted, respectively, the cognitive of COVID-19, the complex psychological response explored the epidemic, the impact of the epidemic on the professional identity of nurses, and the willingness to engage in nursing work after the epidemic. **Conclusion** Nursing students' cognitive of COVID-19 is not comprehensive completely, and their psychological response of the epidemic is complex. Moreover, the epidemic has become an important factor affecting their professional identity. Nevertheless, nursing students still express their willingness to engage in nursing work after the epidemic.
