

酒店客房管理系统的设计与实现

Design and Implementation of Hotel Room Management System

摘要

因为酒店竞争激烈，酒店开始针对细分市场做特色经营，对信息管理系统的需求呈现多样化趋势。本文对传统的酒店的客房管理业务进行深入调研，对客房管理系统进行具体讨论，发现其存在缺陷，提出新型酒店客观管理系统设计方案。

首先从酒店客房管理系统的业务需求入手，进行分析并通过业务逻辑流程图直观说明了酒店客房业务的具体对象，再通过面向对象方法进行分析，完成数据库的设计，从而最终实现该系统。

关键词：客房管理；JAVA；Spring Boot

Abstract

The types and demands of current hotel customers are becoming increasingly diversified, which has led to increasingly fierce competition for hotels. This paper analyzes the current traditional hotel guest room management system with defects, conducts in-depth research on the system and discusses the specific business of hotel guest room management, and then firstly analyzes the business requirements of the hotel guest room management system and passes The business logic flow chart intuitively illustrates the specific objects of the hotel guest room business, and then analyzes through the object-oriented method to complete the database design, thereby completing the implementation of the system.

Key words: guest room management; JAVA; Spring Boot
