The world’s first large language model (LLM) for moon study is coming! It makes studying the moon much faster and easier than before.

The new tool came out in August at the China International Big Data Industry Expo in Guiyang, Guizhou. The Chinese Academy of Sciences’ Institute of Geochemistry (中国科学院地球化学研究所) and the Alibaba Cloud Intelligence Group (阿里云智能集团) made it together.

The LLM is the “smart brain” for the digital moon, which has the most moon information in one place in the world, said Xinhua.

On the moon, there are more than 1 million big craters (大陨石坑) and lots of small ones. It’s really hard for scientists to find all these holes by themselves. The LLM can tell and remember different craters by size, depth and shape.
