

基于 SSM 框架的智慧酒店的设计与实现

基于 SSM 框架的智慧酒店的设计与实现
**Design and Implementation of Smart
Hotel Based on SSM Framework**

摘 要

基于当前科技如此迅猛的发展，互联网技术不断地走进人们的视野逐步得到人们的重视，这也给计算机应用带来了蓬勃的发展。

酒店管理系统的开发采用了 JSP 技术，同时它是采用 SSM 框架来进行开发的，数据库则是采用了 mysql 来用作数据的存储以及管理，极大的能够保证所有数据的完整性，也能为开发这个系统提供更好的安全性。系统根据用户的需求情况以及酒店管理系统的运作情况，然后再根据调研总结出所需要的开发的各功能，再针对这个系统的前台管理和后台管理，对这两部分分别进行优化，并且能够很好的实现数据的增删查改，求。系统分工明确，能够极大的提高酒店管理系统交易效率。以此来实现数据的操作，适应系统的权限管理要求。该系统各个模块之间功能清晰，能够很好的实现当前酒店管理行业的基本要求。

本系统经过多次测试以及研究，结果稳定，操作简便、快速，是一个功能齐全、安全可靠、实用性强、具备各种及其优秀的功能扩展性以及简单维护性的管理系统，符合当今社会的发展趋势。

关键字： 酒店管理系统；SSM 框架；JSP 技术；MYSQL 数据库

Abstract

Based on the rapid development of science and technology, Internet technology has been constantly coming into people's field of vision and gradually gained people's attention, which has also brought a vigorous development to computer applications.

JSP technology is used in the development of hotel management system. At the same time, SSM framework is used in the development of hotel management system. MySQL is used as data storage and management in database, which can greatly ensure the integrity of all data and provide better security for the development of this system. According to the needs of users and the operation of the hotel management system, the system summarizes the various functions needed for development according to the research, and then optimizes the two parts respectively for the front management and back management of the system, and can well realize the addition, deletion, search and modification of data. System division of labor is clear, which can greatly improve the transaction efficiency of hotel management system. In order to realize the operation of data and meet the requirements of system authority management. The function of each module of the system is clear, and it can well achieve the basic requirements of the current hotel management industry. This system has been tested and researched for many times, and the results are stable, easy and fast to operate. It is a management system with complete functions, safety, reliability, practicality, various and excellent function expandability, and simple maintenance. Development trend.

Key words: hotel management system; SSM framework; JSP technology; MYSQL database
