## 造波/消波方法总结

速度入口造波：二次反射

内部造波：源项造波

仿物理造波：动网格，二次反射

阻尼消波/主动消波

# 2. 理论介绍

控制方程

质量守恒

$$\frac{d}{dt} \int_{\text{control volume}} \rho dV + \int_{\text{control surface}} \rho \mathbf{v} \cdot \mathbf{n} dA = \int_{\text{control volume}} \dot{\rho} dV$$

(Perić and Maksoud, 2015)

动量守恒

$$\frac{d}{dt} \int_{\text{control volume}} \rho \mathbf{v} dV + \int_{\text{control surface}} \rho \mathbf{v} (\mathbf{v} \cdot \mathbf{n}) dA = \int_{\text{control volume}} \rho \mathbf{f} dV + \int_{\text{control surface}} \mathbf{t} dA$$

质量源项

$$\dot{\rho} = \frac{2}{h} \dot{m} \quad (\text{Perić and Maksoud, 2015})$$

$$\dot{m} = \rho v h$$

$$\left( \frac{2}{h} \dot{m} \right)$$

动量源项

$$F_{\text{flux}} = \text{힘}(\text{속}_1 + \text{속}_2 | \text{플} |)$$

$$F_{\text{flux}} - \text{플} \quad (\text{Choi and Yoon, 2009})$$

$$F_{\text{flux}}^{1-1}$$

$$F_{\text{flux}} = \frac{F_{\text{flux}} - \text{속}_3}{F_{\text{flux}}^{\text{플}} - \text{속}_3}$$

# 3. 算例设置

计算模型及网格

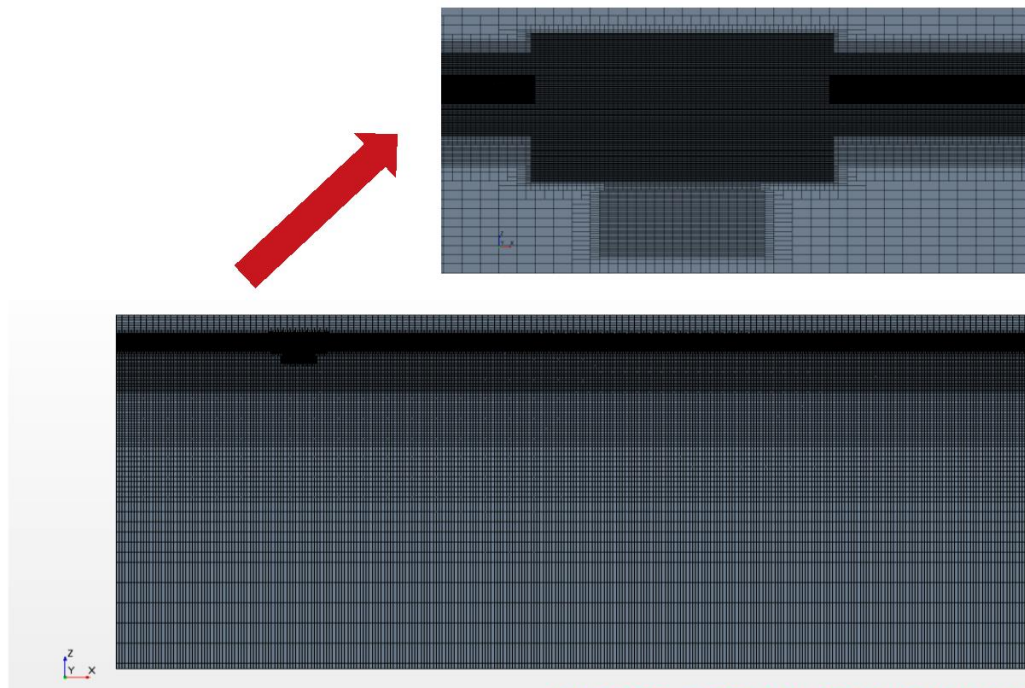

(Perić and Maksoud, 2015)

$\Delta x$	$\lambda$	$\omega$	$U$	$\Delta x / \lambda$	$U$	
0.158m	4.0m	3.93rad/s	1.57/m	0.04/m	2.499m/s	1.601s
$\Delta x$	$\Delta y$	$d$	$\Delta x_{jet}$	$\Delta y_{jet}$	$\Delta x_{fs}$	$\Delta y_{fs}$
$15\lambda$	$\lambda$	$6. \lambda$	$2. \lambda$	$0.2\lambda$	$0.005\lambda$	$0.005\lambda$
						$3. \lambda$

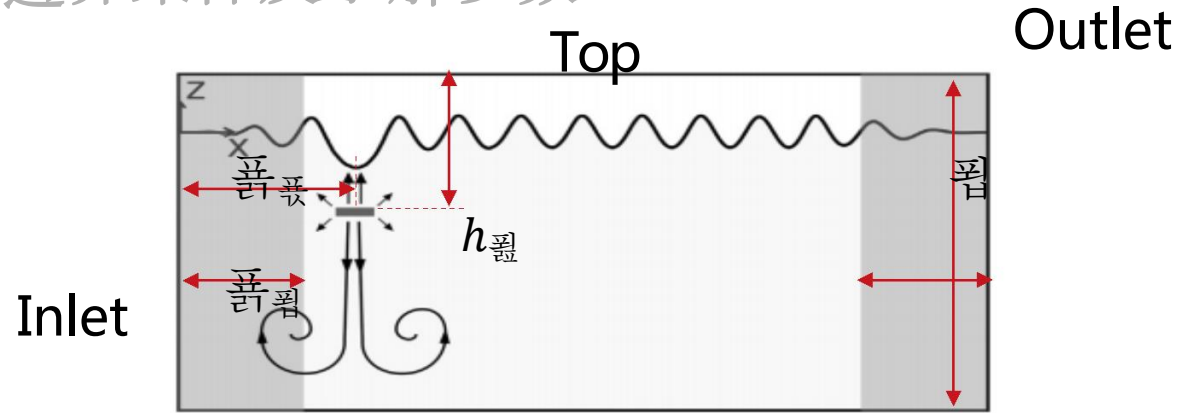

自由液面及源项附近网格

- $\Delta x: 0.05\lambda$
- $\Delta y: 0.005\lambda$
- 远离自由液面，网格渐进增大

### 3. 算例设置

边界条件及求解参数

- Inlet/Outlet/Bottom: no-slip wall
- Top: pressure outlet
- Front & Back: symmetry plane

## Bottom

- 求解器: Implicit Unsteady
- 时间步长 : 0.00155 s

$$\text{Courant Number, } \text{Co} = \frac{v_{\text{max}} \Delta t}{\Delta x} < 0.5$$

- 消波参数 :  
 $\text{Co}_1 = 20$   
 $\text{Co}_2 = 20$   
 $\text{Co}_3 = 2$
- 造波参数 :  
 $\text{Co}_{\text{wave}} = \frac{2v_{\text{max}}}{v_{\text{wave}}}$

$$\text{Co}_{\text{wave}} = 4.7$$

0.158m    4.0m    3.93rad/s    1.57/m    0.04/m    2.499m/s    1.601s
