

# 企业项目管理系统的设计和实现

## 摘 要

目前，企业项目管理系统在日新月异积极发展的过程下，在多元化企业的项目管理中有着极其广泛的应用，通过线上流程有利于提高企业对项目从投标至项目完工过程中的一系列信息管理。

为满足本次毕业设计项目管理的基本需求。该系统在 windows 下开发，设计方面采用 BS 架构模式，基于 PHP 设计，后台使用 MySQL 数据库实现数据逻辑。主要分为管理员管理模块和项目管理模块，通过对企业项目管理知识的认知，能非常规范的将日常工作直观的体现在上线进行，提高项目整体的工作效率，使项目负责人很合理的掌握项目的当前进度，及时应对，并正确的做出决策。本文首先介绍了开发的背景意义，然后给出系统的总体设计及数据库字段，最后介绍系统中主要功能模块和详细设计与实现。

**关键词：** 项目管理系统，数据库，web，MySQL，PHP

## **ABSTRACT**

**At present, with the rapid development of enterprise project management system, it has been widely used in the project management of diversified enterprises. Through the online process, it is conducive to improve a series of information management from bidding to project completion.**

**In order to meet the basic needs of the graduation project project management. The system is developed under windows. The design adopts BS architecture mode, based on PHP design, and uses MySQL database to realize data logic in the background. It is mainly divided into administrator management module and project management module. Through the cognition of enterprise project management knowledge, the daily work can be directly reflected on the line, and the overall work efficiency of the project can be improved. The project leader can reasonably grasp the current progress of the project, respond in time, and make correct decisions. This paper first introduces the background and significance of the development, then gives the overall design and database fields of the system, and finally introduces the main functional modules and detailed design and implementation of the system.**

**Keywords: project management system, database, web, mysql, PHP**
