

# 学生宿舍管理系统设计与实现

## 摘 要

随着计算机技术的发展,它被广泛应用于计算机技术的各个领域的特殊系统中,为客户提供更加周到便捷的服务。然而,随着社会的需求和高校不断给各方面带来的巨大压力,学校在校内和学生宿舍的数量急剧增加,传统的管理方式已经捉襟见肘。为了实现对宿舍资源更有效的管理,减少不必要的目标人力、物力和财力,我们决定开发一个宿舍管理系统。该系统由 Visual studio.NET 2005 和 SQL 2000 数据库在 VB 设计界面和 visualstudio.net2005 共同开发。包括认证模块、管理员管理模块和楼宇管理控制模块。学生宿舍管理系统具有省电、高效的特点,可以更好地管理学生宿舍。系统采用的可视化功能特性 Studio.NET 进行了相关和界面设计。数据库设计采用 SQL 2000 数据库作为后台支持系统,操作简单,维护方便,具有可扩展性。

## Abstract

However, with the demand of society and the continuing pressure of Universities on each control, the number of registered students and dormitories has increased dramatically, and traditional management methods have been stretched. In order to realize the bedroom, make full use of resources for more effective management, reduce unnecessary target human, material and financial resources, so we decided to develop a guidance student dormitory. The system is developed by using Visual studio. NET 2005 and SQL 2000 database in VB design interface using Visual studio. NET in 2005. It mainly includes login module, dormitory administrator management module and building management module. The high efficiency of student dormitory management system can save manpower and make it manage dormitory better. Because we all live in school dormitories, we are familiar with dormitories. It is necessary to develop student dormitory management system by communicating with school dormitory managers, teachers and students. This system uses Visual studio database in VB design interface using Visual studio. It mainly includes login module, dormitory administrator management module and building management module.
