

论坛管理系统的设计与实现

摘 要

在网络还未普及时代，人们只能从报纸或电视上来知道一些自己想要的信息，而且自己也很难将自己的想法传递出去，要讨论一些问题的时候也仅仅是和身边的人一起讨论，这样讨论的圈子就会很局限。人们有自己的一些问题不懂的或者对于某些事有自己想法的，渴望可以和更多的人一起分享和讨论，也希望能够找到更多志同道合的朋友。如今网络发展越来越快，人们的渴望和更多人交流的愿望也终于可以实现。论坛的出现恰恰可以满足人们的需求，在论坛上人们不仅可以了解到其他地方其他人发生的一些事，还可以将自己所知道的想要分享都发表在论坛上，遇上不懂的一些问题也可以在论坛上寻找帮助，更是可以和全国各地的朋友一起讨论。总的来说，论坛就是提供一个人们交流各种经验和探讨各种问题的平台。

该论文所研究的是论坛管理系统是基于 PHP 技术和 MySQL 实现的，具有方便灵活，安全稳定的特点。全文首先探讨项目的开发背景和项目开发的意义，然后是系统的需求分析和可行性分析，再然后实现系统的技术，接着是系统的总体设计，然后是数据库设计和详细的模块设计。最后是总结工作。

关键词：PHP；MySQL；论坛

Abstract

In the era when the Internet is not yet popular, people can only get some information they want from newspapers or TV, and it is difficult for them to pass on their ideas. When discussing some issues, they are only discussing with people around them. , The circle of discussion will be very limited. People have some questions they do n't understand or have their own ideas about certain things. They are eager to share and discuss with more people, and hope to find more like-minded friends. Now that the network is developing faster and faster, people's desire to communicate with more people can finally be realized. The emergence of the forum just meets people's needs. On the forum, people can not only understand what happened to other people in other places, but also post what they know to share on the forum, and encounter some problems that they do not understand. You can also find help on the forum, and even discuss with friends from all over the country. In general, the forum is a platform for people to exchange various experiences and discuss various issues.

What this paper studies is that the forum management system is implemented based on PHP technology and MySQL, which is convenient, flexible, safe and stable. The full text first discusses the development background of the project and the significance of the project development, then the needs analysis and feasibility analysis of the system, then the technology of the system, then the overall design of the system, then the database design and detailed module design. Finally, the work is summarized.

Keywords: PHP; MySQL; forum
